Fulfill your inpatient coder staff needs by promoting within

• Proven individualized training
• One-on-one trainer/coder model
• Outpatient to Inpatient coder training
• MT to coder training
• New graduate to coder training
• Pre-tests to identify key coding concepts that should be included in training
• Coders learn at their own pace
• Significant reduction in QA post-training
• Expert Faculty have trained over 1,000 coders in I-10

“A wonderful process!
I am so pleased with the specialized and individualized instruction that was afforded to one of my coders, who is thrilled to begin a new chapter in her career as an inpatient coder.”

MRO empowers healthcare organizations with proven, enterprise-wide solutions for the secure, compliant and efficient exchange of Protected Health Information (PHI). These solutions include a suite of PHI disclosure management services comprised of release of information (ROI), government and commercial payer audit management and accounting of disclosures. MRO’s technology-driven services reduce the risk of improper disclosure of PHI, ensure unmatched 99.99 percent accuracy and enhance turnaround times. MRO additionally supports its clients’ current and future initiatives, including interoperability, meaningful use and health information exchange.

Release of Information

MRO is the acknowledged industry leader for staffed, shared and remote release of information (ROI) services, and its ROI Online® solution has been rated number one by KLAS for three years in a row (2013, 2014, 2015/2016). The company invests heavily in the hiring, training and education of its processing center and field staffs to ensure the best client experience. Additionally, MRO’s cutting-edge technologies provide high levels of visibility and control through transparent reporting tools and sophisticated workflows that offer industry-leading turnaround times, improved operations and the highest levels of accuracy. MRO mitigates risk by incorporating multiple quality checks by highly trained professionals as well as proprietary, state-of-the-art IdentiScan® technology that uses optical character recognition software to assist record integrity specialists in reviewing every page of medical records before PHI is released. By deploying ROI Online as a centralized platform, healthcare organizations can better manage PHI disclosure, standardize processes and improve compliance throughout the healthcare enterprise. Integrations with Master Patient Indexes (MPI) and the Epic EMR ROI module are available through MROeLink®.

Government and Commercial Payer Audit Management

MRO offers comprehensive compliance services and tracking software for healthcare providers seeking to effectively manage all government and commercial payer audit processes – including RAC, MAC, ZPIC, UPIC and others. Compliance services include special handling for audit requests and appeals letters, additional quality assurance checks (including deadline and address verification) and expedited fulfillment through various delivery methods including electronic submission of medical documentation (esMD) electronic delivery to CMS. Additionally, MRO provides clients with an audit enforcement team that works with managed care companies and auditors to ensure appropriate fee invoicing and to monitor record request limits. MRO also offers an audit tracking and reporting application AUDITRENDS® Online.

Accounting of Disclosures

MRO’s accounting of disclosures (ADD) solutions enable healthcare organizations to enforce disclosure policies and centrally track, manage and report all disclosures made across the entire healthcare enterprise, inside and outside of the HIM department. ADD Online™ includes capabilities of capturing disclosures that are made to federal, state and local public health databases (i.e., Office of Infectious Diseases, Cancer Registries, etc.) and may also be able to track disclosures to HIEs as they emerge. ADD Online also features an embedded breach assessment tool to help an organization determine if a breach has occurred, and it offers the proper tracking of any identified disclosures in question.

Interoperability Services

MRO’s clients have access to the following interoperability solutions and services: MROeLink, a suite of interfaces between ROI Online and a healthcare organization’s information technology systems to enhance ROI workflows through automation; MRODirect®, MRO’s platform for the Direct Secure Messaging of PHI for the purposes of improving efficiency and effectiveness of transitions of care between healthcare providers; and government programs for PHI exchange including Social Security Administration (SSA) Disability Determination (DDS) interfaces and esMD connectivity to CMS.

“We found an opportunity to be a part of something new and great by partnering with the MRO to implement their ROI solution. By interfacing MRO’s system with our Epic ROI module and MPI, we’ve reduced errors and improved efficiencies—in fact, the request logging process has been cut in half.”
Charlotte Walton-Sweeney, RHT, Director of Health Information Management at Lancaster General Health/Penn Medicine

“MRO’s staff is extremely efficient and well-trained. We have seen a significant reduction in call volume and our turnaround times have greatly improved as well. With MRO, we have received various compliments on our superior customer service and that was previously a rare occurrence. I would honestly say that this is the best ROI vendor I have ever had the pleasure of working with.”
Linda Bugdanowitz, RHIA, CHFP, CCS, CHPC, CPC, CPMSM, HIM Consultant
